

Intercity Freight Load Matching Marketplace

Use Case Flow Table — UC-01 to UC-09

Use Case ID	Use Case	Actor(s)	Main Flow	Alternate / Exception Flow
UC-01	Register / Verify User	Shipper, Freight Carrier, Admin	1. User opens the registration page. 2. User enters required details. 3. System validates the entered information. 4. System creates the user account. 5. Admin/system verifies the user's details. 6. System activates the account and notifies the user.	A1. Required information is missing → System asks the user to provide the missing details. A2. Invalid information is entered → System displays an error message. A3. Verification fails → Account remains inactive and user is notified.
UC-02	Post Freight Load	Shipper	1. Shipper logs into the system. 2. Shipper selects Post Freight Load. 3. Shipper enters origin, destination, cargo details, delivery requirements and auction deadline. 4. System validates the information. 5. System creates and publishes the freight load. 6. The load becomes visible to verified carriers.	A1. Required shipment information is missing → System asks the shipper to complete the details. A2. Invalid shipment details are entered → System displays an error. A3. Auction deadline is invalid → System asks the shipper to enter a valid deadline.
UC-03	View Freight Loads	Freight Carrier	1. Carrier logs into the system. 2. System verifies the carrier's account. 3. Carrier opens the available freight loads section. 4. System displays active freight loads. 5. Carrier views shipment details such as origin, destination, cargo and deadline. 6. Carrier selects a suitable load.	A1. Carrier is not verified → System denies access to freight loads. A2. No active freight loads are available → System displays an appropriate message. A3. Load is no longer active → System removes it from the available list.
UC-04	Submit Bids	Freight Carrier	1. Carrier selects an available freight load. 2. Carrier enters the bid amount and required details. 3. System validates the bid. 4. System checks whether the carrier is verified and the auction is still open. 5. System records the bid. 6. System confirms successful bid submission to the carrier.	A1. Carrier is unverified → Bid submission is rejected. A2. Auction deadline has passed → System rejects the bid. A3. Invalid bid amount/details → System asks the carrier to correct the information.

Use Case ID	Use Case	Actor(s)	Main Flow	Alternate / Exception Flow
UC-05	Review Bids	Shipper, Admin	1. Shipper logs into the system. 2. Shipper selects a posted freight load. 3. System retrieves all valid bids. 4. System displays carrier details and bid amounts. 5. Shipper compares the available bids. 6. Shipper selects a preferred bid for further processing.	A1. No bids have been received → System informs the shipper that no bids are available. A2. Invalid/rejected bids exist → System excludes them from the valid bid list. A3. Unauthorized user attempts to view bids → System denies access.
UC-06	Select Carrier	Shipper	1. Shipper reviews the submitted bids. 2. Shipper selects one valid bid. 3. System displays the selected carrier and bid details. 4. Shipper confirms the selection. 5. System assigns the selected carrier to the freight shipment. 6. System records the assignment and notifies the carrier.	A1. Selected bid is no longer valid → System asks the shipper to select another bid. A2. Shipper cancels the selection → No carrier is assigned. A3. No valid bids are available → System prevents carrier selection.
UC-07	Submit Proof of Delivery	Freight Carrier	1. Carrier completes the freight delivery. 2. Carrier logs into the system. 3. Carrier selects the completed shipment. 4. Carrier uploads the electronic proof of delivery (e-POD). 5. System validates the submitted document. 6. System records the proof of delivery. 7. System forwards it for verification.	A1. Proof of delivery is missing → System asks the carrier to upload it. A2. Invalid/corrupted proof is uploaded → System rejects the submission. A3. Carrier submits proof for an invalid shipment → System rejects the submission.
UC-08	Verify Proof of Delivery	Admin / System	1. System receives the submitted proof of delivery. 2. System checks the proof against the shipment details. 3. Admin/system verifies the submitted proof. 4. System marks the proof of delivery as verified. 5. System updates the shipment status. 6. System triggers the milestone payment process.	A1. Proof of delivery is invalid → System marks it as rejected and notifies the carrier. A2. Required information is missing → Verification fails and carrier is asked to resubmit. A3. Verification is unsuccessful → Payment release is not triggered.

Use Case ID	Use Case	Actor(s)	Main Flow	Alternate / Exception Flow
UC-09	Release Milestone Payment	Payment Gateway, System	1. System receives confirmation of verified proof of delivery. 2. System identifies the corresponding milestone payment held in escrow. 3. System sends the payment release request to the payment gateway. 4. Payment gateway processes the transaction. 5. Payment is released to the selected carrier. 6. System records the successful payment and updates the shipment status. 7. Shipper and carrier are notified.	A1. Proof of delivery is not verified → Payment is not released. A2. Payment gateway rejects/fails the transaction → System records the failure and notifies the relevant parties. A3. Payment processing exceeds the required time → System records the delay and retries/flags the transaction.
